RAHAT AHSAN

Junior DevOps Engineer — Kubernetes | GitOps | CI/CD | Linux
Brandon, Manitoba | s.rahatahsan@gmail.com | LinkedIn | Medium | GitHub

PROFESSIONAL OVERVIEW

DevOps/Platform engineer running production-grade Kubernetes infrastructure — GitOps, CI/CD, observability — while working full-time as a Data Analyst, where I turn raw production data into decisions for a 650-person manufacturing operation, including contract financial-reporting work that helped secure federal government funding. I run a multi-tenant SaaS platform on Azure Kubernetes where onboarding a new customer is a single Terraform change with security and monitoring wired in automatically, plus a self-hosted Kubernetes homelab with full Prometheus/Grafana alerting — every incident documented and published. Currently closing out the AWS Solutions Architect Associate certification (exam scheduled).

TECHNICAL SKILLS

- Container Orchestration: Kubernetes, Docker, Helm
- CI/CD & Testing: GitHub Actions, Flux, Renovate, Trivy, Git
- Cloud & IaC: Azure, AWS (SAA — exam scheduled), Terraform
- Observability: Prometheus, Grafana, Alertmanager
- Networking & Security: Traefik, Cilium, Cloudflare Tunnel, Tailscale
- Linux & Languages: Arch Linux, Ubuntu, Bash, Python
- Cost & Reporting: Excel (Power Query, pivot tables), budget/variance analysis

PROJECTS

Cloudlab | Multi-Tenant SaaS Platform on Azure Kubernetes
github.com/AhsanRahat12/Cloudlab

- Multi-tenant SaaS platform on Azure Kubernetes — validated with 3 live tenant deployments, isolated via namespace, network policy, and separate databases; onboarding reduced to a single Terraform change
- GitOps deployment via Flux, monitored through Prometheus/Grafana with Telegram alerting, plus automated per-tenant backups

Kubernetes Homelab | Self-Hosted GitOps Infrastructure Platform
github.com/AhsanRahat12/Homelab

- Self-hosted 2-node bare-metal Kubernetes cluster (k3s on Raspberry Pi 5) with Prometheus/Grafana/Alertmanager monitoring, Slack alerting, and iSCSI-backed storage via a QNAP NAS
- Diagnosed and recovered from real production incidents — including iSCSI-based storage and database corruption — each root-caused and documented in-repo; GitOps via Flux, zero manual deploy steps

Study App | Containerized CI/CD & GitOps Release Pipeline
github.com/AhsanRahat12/Study_App

- Study-session tracker (FastAPI backend, Flask frontend) with fully automated CI/CD — GitHub Actions runs tests, Trivy scans, and Docker builds on every change, gated behind PR review with automated release versioning
- Cut container image over 22x (450MB → 20MB) with zero actionable Critical/High CVEs on the final build

WORK EXPERIENCE

Data Analyst | Green World Fashions Ltd. Jan 2024 – Present

- Built a Power Query pipeline connecting hours-entry directly to the salary/budget database for 650 production workers, replacing a full day of manual monthly calculation with an automated process
- Added a 30-day-forward salary cost projection — a capability that didn't exist before — reducing budget/projection mismatches from manual data entry
- Maintained production timeline datasets ensuring manufacturing deadlines stayed on track in a high-volume garments facility

Financial Reporting & Cost Analysis Contractor | OPCN Aug 2024

- Prepared student financial reporting and cost analysis under a contract engagement, tracking program-related costs and variances
- Reporting was used directly to help secure federal government funding, requiring a high degree of accuracy and accountability

Junior DevOps Engineer (Training & Mentorship) | KubeCraft Mar 2025 – Present

- Actively participating in KubeCraft's hands-on DevOps internship program, focused on building production-ready skills through real-world labs, coaching, and project execution. Current focus: AWS Certified Solutions Architect – Associate

EDUCATION & CREDENTIALS

- Bachelor of Science, Environmental Science — Brandon University, Manitoba, Canada | 2024
- AWS Certified Solutions Architect – Associate — exam scheduled
- Canadian Permanent Resident, Manitoba — open to relocation. 120+ technical posts on LinkedIn/X, longer-form writing on Medium
